

## **PREFACE**

The purpose of this Handbook is to provide a collection of past publications considered useful in the mechanical aspects of electric overhead traveling (EOT) cranes. These articles, dating back to 1952, were previously published in *IRON AND STEEL ENGINEER*, a monthly AISE publication. The Mechanical Working Group of Subcommittee No. 6 on Electric Overhead Traveling Cranes for Steel Mill Service hopes readers will benefit from this collection.

## **DISCLAIMER**

These articles have been prepared by various engineers, steel company representatives and members of the Association of Iron and Steel Engineers (AISE), who considered the technology available at the time of preparation. The articles do not represent either minimum acceptable standards or mandatory specifications. AISE assumes no responsibility since publication does not constitute endorsement of specific information.

The Association of Iron and Steel Engineers in no way mandates or is responsible for use of these articles, whether voluntary or pursuant to a mandate of others. The AISE assumes and strongly recommends that parties who intend to use this information will examine it thoroughly and utilize appropriate professional guidance in adapting the information to any particular project.

The use of language in these articles, that might be construed as mandatory, is intended to preserve the integrity of the information as viewed by the authors. It is not intended to require strict compliance where not necessitated by safety or operational needs.
